UGANDA-JMS DEPLOYMENT OF AUTOMATIC IDENTIFICATION AND DATA CAPTURE (AIDC)

Gilbert Rutebemberwa – Manager ICT

ABOUT JMS-WHAT WE DO?

- Founded in **1979**, as a joint venture between UCMB & UPMB.
- **One stop** centre for All Health solutions.
- **Procurement, Warehousing, sale and Distribution** of Medicines, Sundries, Medical Equipment and Furniture.
- **Bio Medical Equipment** needs assessment, Equipment placement, installation, routine maintenance and repair.
- **Quality Assurance-** ISO 9001:2015 Accredited
- Health systems strengthening and **Capacity Building.**
- **Project management** – Supply chain management.
 - (Proc, Warehousing and Distribution).

GSI BARCODING SYSTEM INTEGRATION WITH IFS SYSTEM

- ✓ **USAID** contracted **PSM** to support **JMS** to select and implement **AIDC** solution
- ✓ **PSM** contracted a firm called **Radley** to implement the installation and usage of **GTINs** at **JMS**
- ✓ The Implementation started in **October 2022** and it is ongoing.

Benefits

- Better inventory management
- Improved warehouse efficiency
- Reduced inventory costs
- Reduced labour costs
- Improved security
- Better managerial decision making
- Error elimination

PRODUCT MASTER DATA APPROACH

Master Data

Item	Description	Also Know As	Case Quantity
GFPMEDI010	RIFAMPICIN 150MG + ISONIAZID 75MG, 672 TABS	NEW	
GFPMEDI011	RIFAMPICIN 150MG + ISONIAZID 75MG + PYRAZINAMIDE 400MG + ETHAMBUTOL 275MG, 672 TABS	NEW	
GFPMEDI002	LAMIVUDINE 150MG & ZIDOVUDINE 300MG TAB'S	NEW	
GFPMEDI004	ABACAVIR/DOLUTEGRAVIR/LAMIVUDINE 600/50/300MG TAB'S	NEW	
GFPMEDI005	COTRIMOXAZOLE 960MG TAB'S	NEW	
GFPMEDI006	LAMIVUDINE/TENOFOVIR DF/DOLUTEGRAVIR 300/300/50MG TAB'S	NEW	
GFPMEDI007	TENOFOVIR DF 300MG, LAMIVUDINE 300MG & EFAVIRENZ 400MG TAB'S	NEW	
HOSFURN030R1	COMMODE CHAIR WITHOUT WHEELS	NEW	
HOSFURN065F	INSTRUMENT TROLLEY 3 SHELVES, STAINLESS STEEL (67 X47 X 90)CM	NEW	
HOSFURN066F	INSTRUMENT TROLLEY 2 SHELVES, STAINLESS STEEL	NEW	
HPMEDFUNG011	KETOCONAZOLE 200MG TAB	NEW	
HPMEDFUNG011P	KETOCONAZOLE 200MG TAB	NEW	

Product Master data, supported by IFS and the AIDC Endeavor application, was structured to support GTIN and packaging hierarchies, including for products that do not have GTIN, as common brands in Uganda lack GTINs

Enabled the system to operate using GTIN or internal product identifiers (AI [241])

Using internal product identifiers uses Manufacturer ID on the Purchase Order to differentiate packaging hierarchies to label incoming product with Case or Pallet quantities

Implemented a Watchdog process to identify incomplete data prior to needing that data in Purchase Order Receiving

AIDC IMPLEMENTATION APPROACH

Coordinate hardware, software, PMDM and step-by-step transaction data capture

IFS connectivity with the AIDC Application

Users have been sensitized to the need for accurate data in the ERP to minimize expiations on the Watchdog Report

Integrated Product Master Data Management processes between IFS and Endeavor

All possible manufacturers of a product are captured in Master Data

Capture packaging hierarchies with Case and Pallet quantities to fully benefit from the automation

Republic of Botswana
Ministry of Health (MOH)

END TO END DATA VISIBILITY THROUGH GSI STANDARDS

Central Medical Stores
By Nick Shamukuni

Background

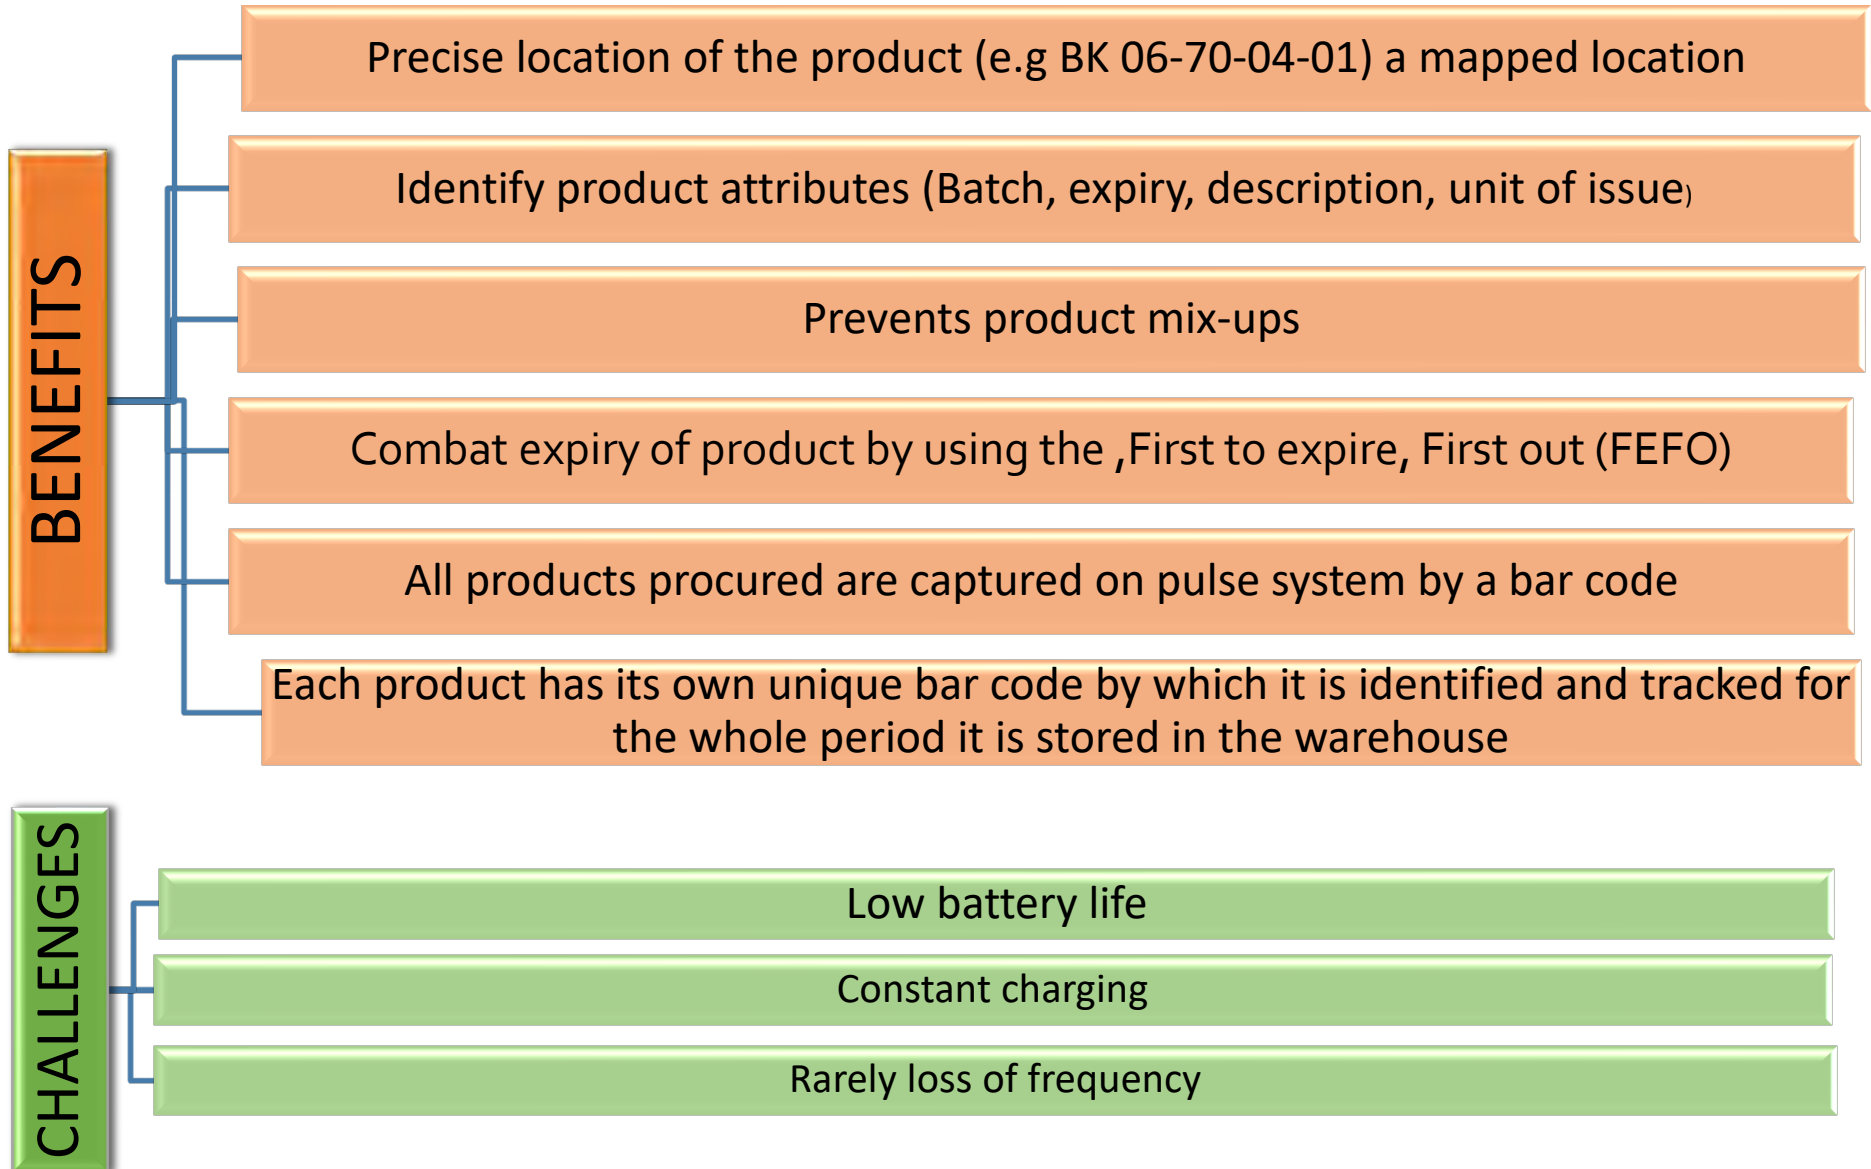

- Central Medical Stores (CMS) is a Division in the Ministry of Health under the Department of Health Services Management (HSM) responsible for the procurement, warehousing and distribution of medicines and other related medical commodities.
- CMS serves the public sector at a **tertiary level** (referral hospital), **secondary level** (district hospitals), **primary level** (primary hospitals, clinics, lab services, health Posts) and **NGOs** (public health commodities)
- It supplies the whole country using the pull system for effective distribution of health commodities.
- Botswana Postal Services is an outsourced service responsible for Warehouse Management and Distribution of health commodities.
 - This includes transportation/delivery of Pharmaceuticals from CMS to health facilities(113 delivery points).

Botswana National Traceability Strategy

- Strategic Objective 3: Increased supply chain operational efficiencies through the adoption of global standards for product and location identification, data capture, and data sharing.
- The strategy and vision was developed in support of the Ministry of health 2017-2023 strategy.
- This strategy defines the vision to promote and provide integrated, holistic and sustainable, preventative, curative and rehabilitative quality health service to the nation.

IT SYSTEMS USED IN CMS-PULSE WMS

Use of RF Devices

Receiving Goods

- Used to capture received products into the pulse system completing the receiving process of goods

Inspection of Received Goods

- After quality control approves the received goods, the RF devices are used to capture the products into the warehouse rendering them ready for storage and now part of CMS stock

Capturing & Put-Away

- RF devices are used to put received products (now CMS stock) in bulk locations and replenishment of small picking areas from bulk (used to update Pulse system before physically moving the product)

Stock Control & Call center

- Used in Stock taking (monthly cycle counts, daily empty location checks and scanning unknown products)
- Logs calls from Facilities, Receives orders and captures the orders into the Pulse WMS.

Quality Control

- After QC approves the picked products, the RF device is used to remove the product from CMS stock to dispatch for distribution

Distribution & Dispatch

- Picking of orders from bulk and small picking locations and assembling for QC check
- Packed orders will be confirmed in the Pulse WMS and the system will generate Waybill, Route Map, load orders and ready for delivery.

Way Forward

- Need for visibility of products – unique identifier
- Need to develop infrastructure for visibility
- Require interfaced systems to enhance the use of the GS1 standard
- Interactions with stakeholders
- Legislative framework for the implementation for compliance with the standard

Advancing Pharmaceutical Traceability in Zambia

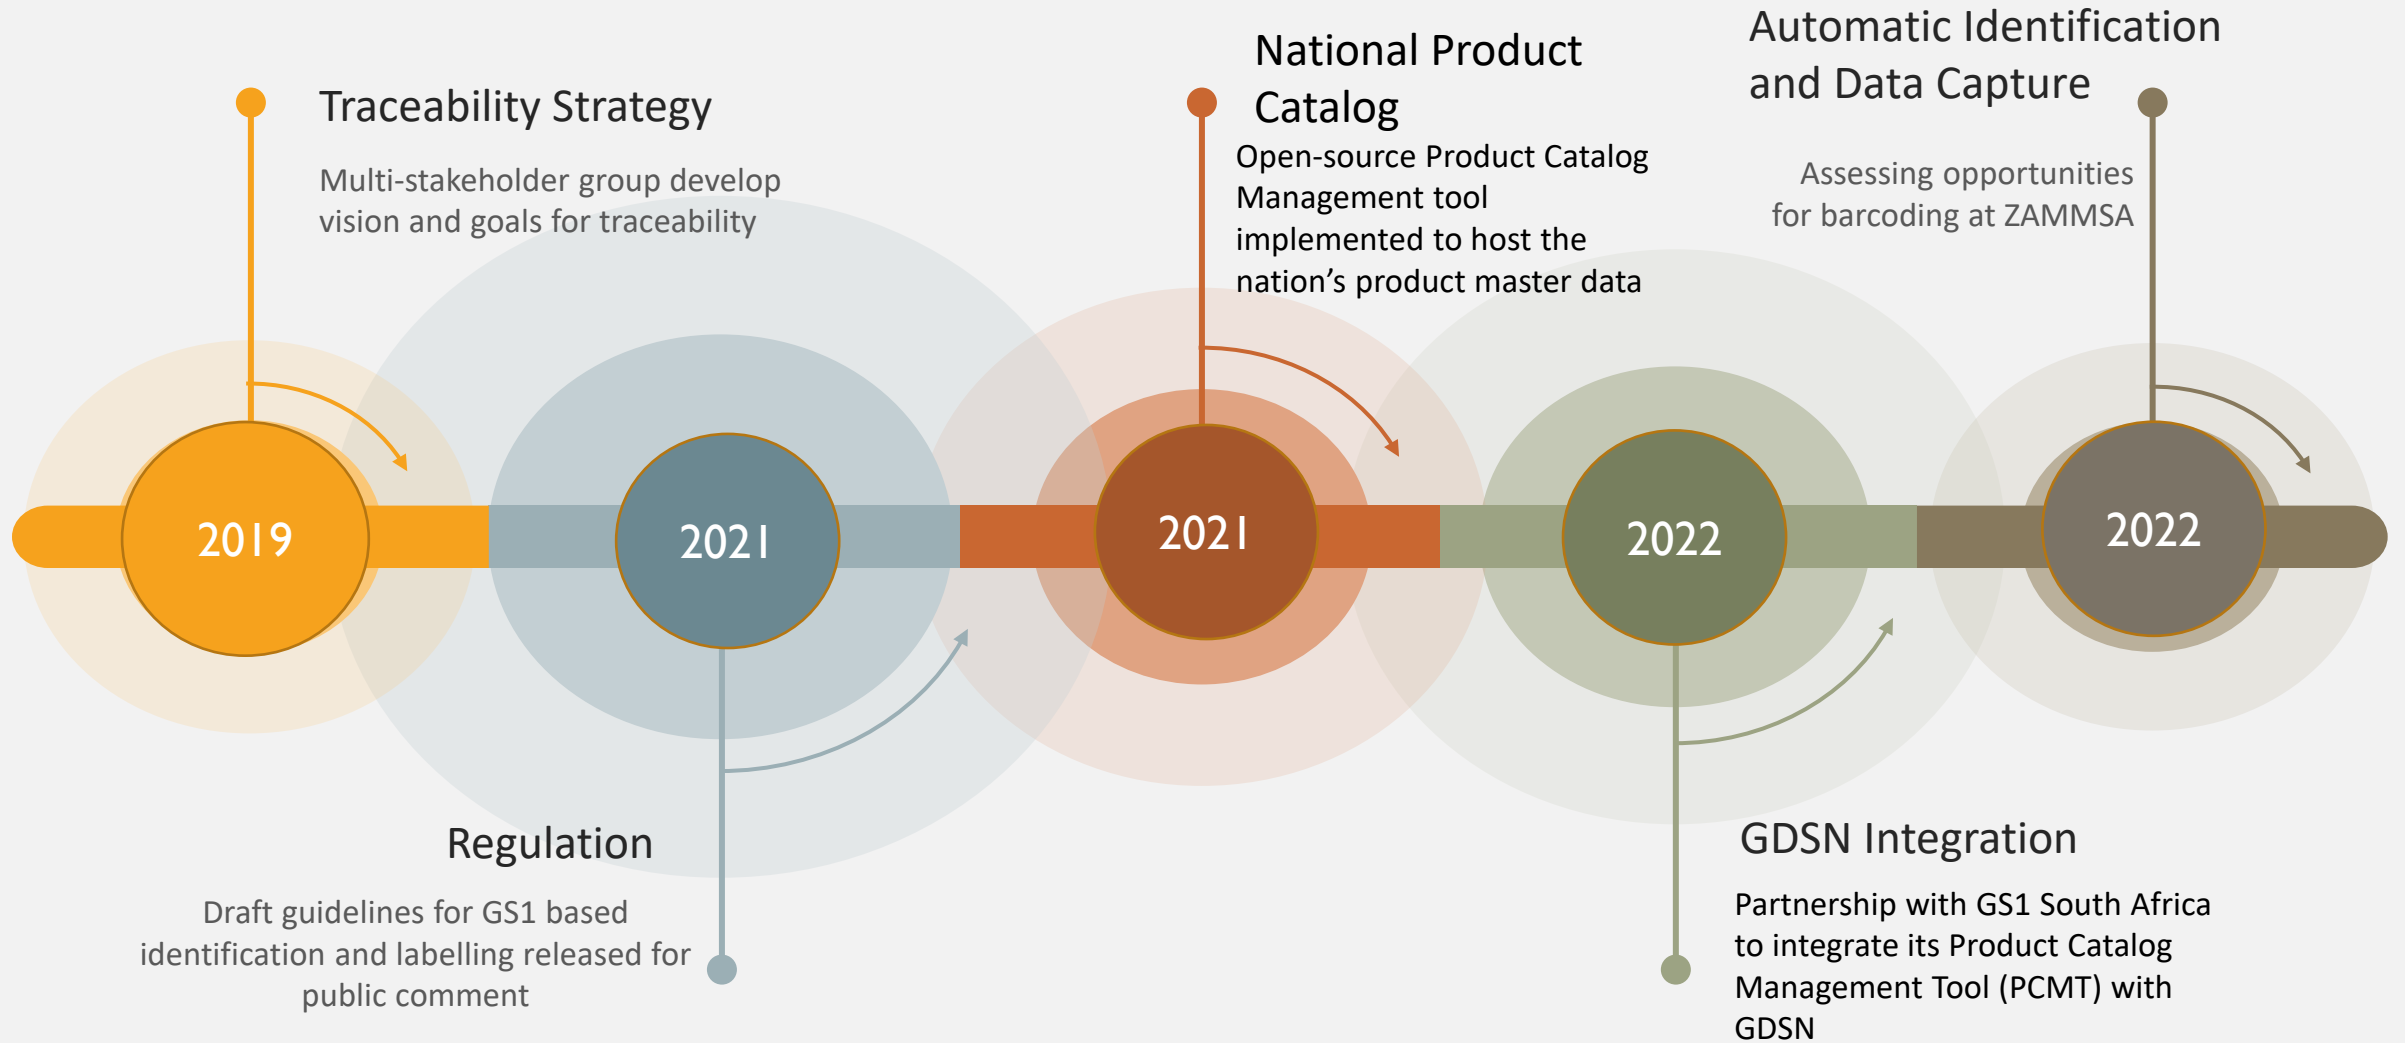

Presented by:

Sam Phiri – Ministry of Health

Makomani Siyanga – Zambia Medicines
Regulatory Authority

BACKGROUND

EXPECT EFFICIENCY GAINS AT THE CENTRAL WAREHOUSE

ZAMMSA is a key player in the National Supply Chain forming an interface between suppliers and beneficiary health facilities.

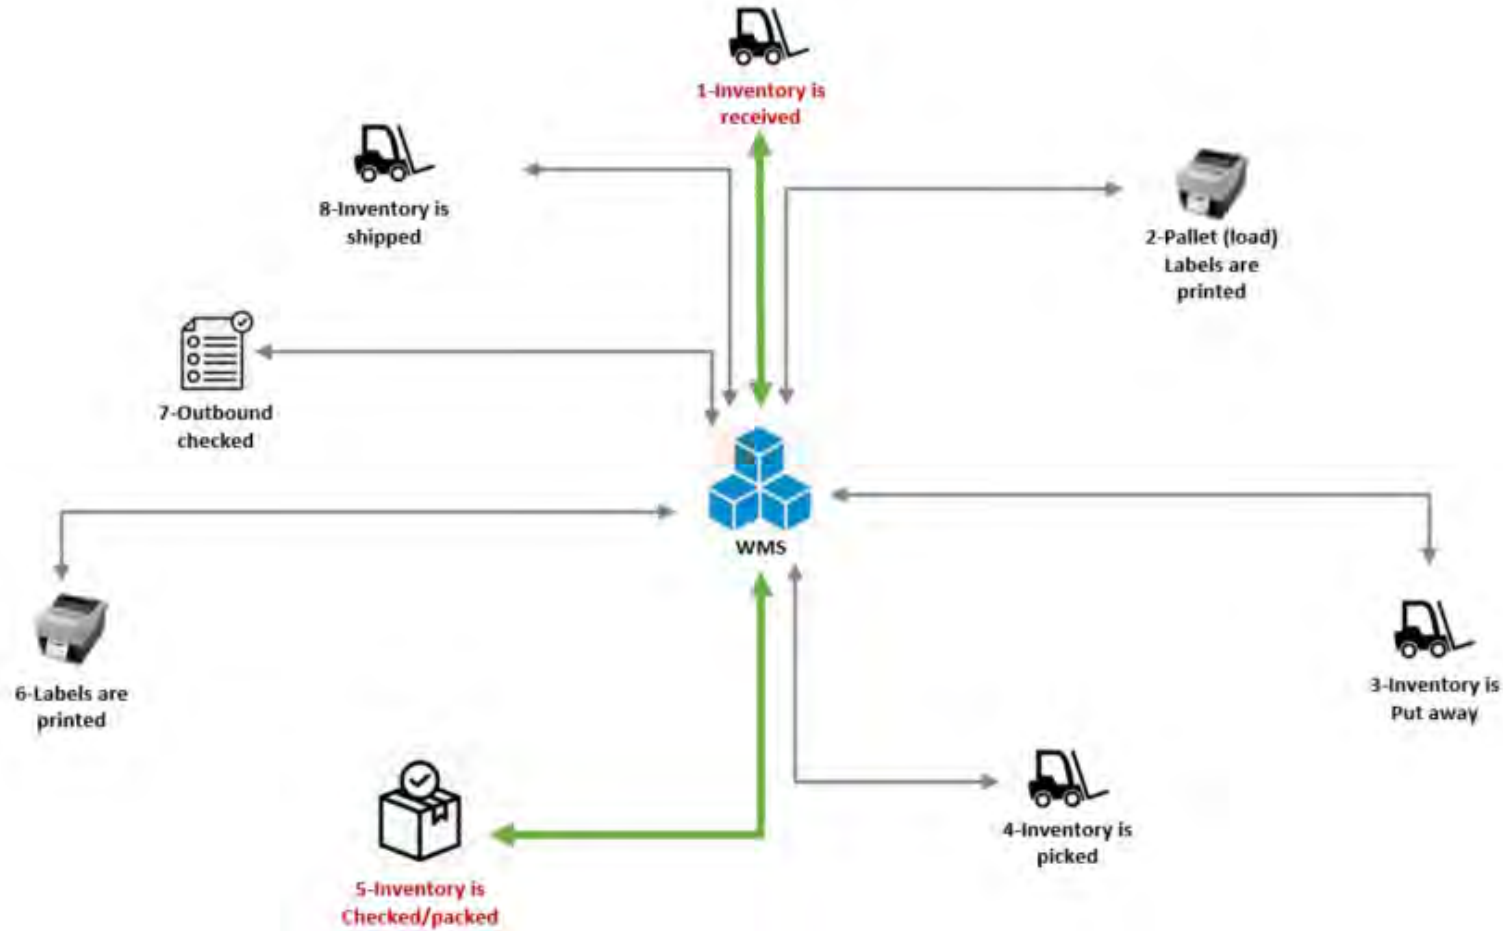

By virtue of its position, ZAMMSA aims to develop systems that are interoperable with other systems e.g., eLMIS. Data should therefore be consistent across platforms.

This requires synchronization of data with a source of truth for product information i.e., PCMT

ZAMMSA uses internal barcodes for bin and floor locations to facilitate put-aways, picking and loading - opportunity to include scanning of GSI barcodes

OPPORTUNITIES FOR GSI BASED BARCODING

Target Functions: Receiving and Packing

ZAMMSA TRANSFORMATION CURRENT STATE VS FUTURE STATE – RECEIVING AND PACKING

- WMS data not configured to support the concept of "each" "case", "pallet)
- Manually enter product information - error prone
- Manually calculate self-life for FIFO principles
- Use of Cubiscan to measure volumetrics

Current State

- Master data from GDSN is shared with WMS through PCMT
- Configure WMS to support data hierarchies (Pallet, each, case)
- Automate integration of WMS with national product catalog

Transformation

- Attributes such as volumetrics sourced directly from GDSN via PCMT
- GS1 Barcode is scanned, GTIN used to query master data against MSL SKU.
- GTIN data used to automatically complete the receiving documents

Future State

TRANSFORMATION

WAY FORWARD

Strengthen the legal frameworks and guidelines

Enforcing the master data sharing and data capturing from the national product catalogue through GDSN to ZAMRA and ZAMMSA

Position ZAMMSA hubs to receiving standardized product data from ZAMMSA.

Capacity building of ZAMMSA Staff on GSI standards
